

ABSTRACT OF THE DISCLOSURE

[0039] Aspects of the present invention are directed to a system, method, and apparatus for annotating decompressed frames from a video sequence. In one embodiment, a data structure comprising a compressed representation of a first frame and a set of parameters is received. The first frame is decompressed and a graphic displaying at least one of the parameters is created. The graphic displaying at least one of the parameters is annotated to the decompressed first frame.
